Tips to record a video with your cell phone

1

Always record horizontally

Do not shoot vertically.

2

Stabilize the phone

Leave the cell phone in a fixed place, leaning on some books, boxes... Use a tripod if you can. If someone is filming you, ask them to spread their legs a little so as not to lose stability.

3

Keep an eye on the frame

Place the cell phone at the height of your eyes, never focus from below. Try to frame yourself from top of your chest upwards. Do not use the digital zoom of the camera, it loses quality.

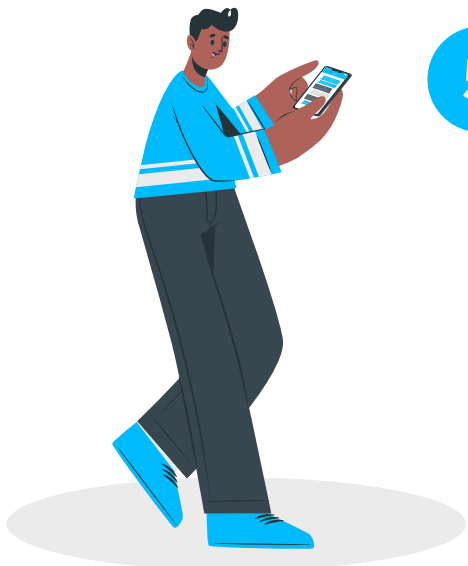

6

Tips to record a video with your cell phone

4

Take care of the illumination

Look for well-lit places and face the light, never backlit. Avoid shooting at night.

5

Pay attention to sound

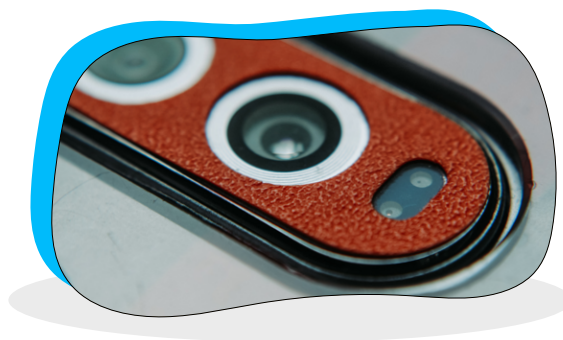

Be careful not to touch or cover the cell phone's microphone, look for a quiet place. Speak loud and clear.

6

Clean the lens

Make sure you have enough battery and enough space in your cell phone's memory. Always choose the highest recording quality.

Do not forget to check the result and make sure that it has been recorded perfectly and send it to us by mail or by Transfer. Do not use WhatsApp. The file loses quality.

Congratulations, you already have your video!
